CAPITAL ASSESSMENT AND ADEQUACY

Scope of Applications

The Basel-III Framework is applicable to the bank. Standardized Approach is used for calculating the Capital Adequacy for Credit and Market risk, whereas, Basic Indicator Approach (BIA) is used for Operational Risk Capital Adequacy purposes.

Capital management

Objectives and goals of managing capital

The Bank manages its capital to attain the following objectives and goals:

- an appropriately capitalized status, as defined by banking regulations;
- acquire strong credit ratings that enable an optimized funding mix and liquidity sources at lesser costs;
- cover all risks underlying business activities;
- retain flexibility to harness future investment opportunities; build and expand even in stressed times.

Statutory minimum capital requirement and Capital Adequacy Ratio (CAR)

The capital adequacy ratio of the Bank was subject to the Basel III capital adequacy guidelines stipulated by the State Bank of Pakistan through its BPRD Circular No. 06 of 2013 dated August 15, 2013. These instructions are effective from December 31, 2013 in a phased manner with full implementation intended by December 31, 2019.

Phase-in arrangement and full implementation of the minimum capital requirements:

* Capital Conservation Buffer (CCB) Consisting of CET1 only

The Minimum Capital Requirement of the Bank stands at Rs.10 Billion and is in compliance with the required capital adequacy ratio including CCB (12.50% of the risk-weighted assets) through improvement in the asset quality at the existing volume level, ensuring better recovery management and composition of asset mix with low risk. Banking operations are categorized as either trading book or banking book and risk-weighted assets are determined according to specified requirements of the State Bank of Pakistan that seek to reflect the varying levels of risk attached to assets and off-balance sheet exposures. The total risk-weighted exposures comprise of the credit risk, market risk and operational risk.

Basel-III Framework enables a more risk-sensitive regulatory capital calculation to promote long term viability of the Bank. As the Bank conducts business on a wide area network basis, it is critical that it is able to continuously monitor the exposure across entire organization and aggregate the risks so as to take an integrated view. Maximization of the return on risk-adjusted capital is the principal basis to be used in determining how capital is allocated within the Bank to particular operations or activities.

The Bank has adopted Standardized Approach to measure Credit risk regulatory capital charge in compliance with Basel-III requirements. The Bank measures and manages Market Risk by using conventional methods i.e. notional amounts, sensitivity and combinations of various limits.Beside conventional methods, the Bank also uses VaR (Value at Risk) technique for market risk assessment of positions assumed by its Treasury and FX Group. In-house based solutions are used for calculating mark to market value of positions and generating VaR (value at risk) and sensitivity numbers. Thresholds for different positions are established to compare the expected losses at a given confidence level and over a specified time horizon. Currently, the bank is reporting operational risk capital charge under Basic Indicator Approach (BIA).

Credit Risk - General Disclosures

The Bank has adopted Standardized approach of Basel II for calculation of capital charge against credit risk in line with SBP's requirements.

Credit Risk: Disclosures for portfolio subject to the Standardized Approach

Under standardized approach, the capital requirement is based on the credit rating assigned to the counter parties by the External Credit Assessment Institutions (ECAIs) duly recognized by SBP for capital adequacy purposes. The Bank utilizes, wherever available, the credit ratings assigned by the SBP recognized ECAIs, viz. PACRA (Pakistan Credit Rating Agency), JCR-VIS (Japan Credit Rating Company – Vital Information Systems), Fitch, Moody’s and Standard & Poors. Credit rating data for financing is obtained from recognized External Credit Assessment Institutions and then mapped to State Bank of Pakistan’s Rating Grades.

Type of Exposures for which the ratings from the External Credit Rating Agencies are used by the Bank.

Exposures	JCR-VIS	PACRA	Other (S&P / Moody's / Fitch)
Corporate	Yes	Yes	-
Banks	Yes	Yes	Yes
Sovereigns	-	-	Yes
SME's	Yes	Yes	-

The criteria for transfer of public issue ratings onto comparable assets in the banking book and the alignment of the alphanumerical scale of each agency used with risk buckets is the same as specified by the banking regulator SBP in BSD Circular No.8 table 2.3 dated June 27, 2006.

Credit Risk: Disclosures with respect to Credit Risk Mitigation for Standardized Approach

The Bank does not make use of on and off-balance sheet netting in capital charge calculations under Basel-II's Standardized Approach for Credit Risk.

Credit Risk: Disclosures for portfolio subject to the Standardized Approach

Credit risk arises from our dealings with individuals, corporate clients, financial institutions, sovereigns etc. The Bank is exposed to credit risk through its financing and investment activities. It stems from the Bank's both, on and off-balance sheet activities. Credit risk makes up the largest part of the Bank's exposure. Purpose of Credit Risk Management function is to identify, measure, manage, monitor and mitigate credit risk. Organizational structure of this function ensures pre and post-facto management of credit risk. While, Credit Review function provides pre-fact evaluation of counterparties, the Credit Risk Control (CRC) performs post-fact evaluation of financing facilities and reviews clients' performance on an ongoing basis.

The Bank has adopted Standardized Approach to measure Credit risk regulatory capital charge in compliance with Basel-III requirements. The approach mainly takes into account the assessment of external credit rating agencies. In line with SBP guidelines on Internal Credit Risk Rating Systems, the Bank has developed rating systems and all its corporate and commercial financing customers are internally rated. The Bank is in the process of continuously improving the system and bringing it inline with the Basel framework requirements.

In order to manage the Bank's credit risk, following policies and procedures are in place:

- Individuals who take or manage risks clearly understand them in order to protect the Bank from avoidable risks;
- Credit facility or material change to the credit facility is allowed subject to credit review;
- Approval and review process is reviewed by RM&PRC and internal audit;

As a part of credit assessment the Bank uses an internal rating framework as well as the ratings assigned by the external credit rating agencies, wherever available.

Ongoing administration of the credit portfolio is an essential part of the credit process that supports and controls extension and maintenance of credit. The Bank's Credit Risk Control, being an independent function from the business and operations group, is responsible for performing the following activities:

- Credit disbursement authorization;
- Collateral coverage and monitoring;
- Compliance of loan covenants/ terms of approval;
- Maintenance/ custody of collateral and security documentation.

Credit Risk Monitoring is based on a comprehensive reporting framework. Continuous monitoring of the credit portfolio and the risks attached thereto are carried out at different levels including businesses, Audit & Risk Assets Review, Credit Risk Control, Credit Risk Management Division, etc.

To ensure a prudent distribution of asset portfolio, the Bank manages its lending and investment activities within an appropriate limits framework. Per party exposure limit is maintained in accordance with SBP Prudential Regulation R-1.

The Bank creates specific provision against Non- Performing Financings (NPFs) in accordance with the Prudential Regulations and other directives issued by the State Bank of Pakistan (SBP) and charged to the profit and loss account. Provisions are held against identified as well as unidentified losses. Provisions against unidentified losses include general provision against consumer, small entities and micro financings made in accordance with the requirements of the Prudential Regulations issued by SBP and provision based on historical loss experience on financings.

Leverage Ratio (LR):

In order to avoid building-up excessive on and off-balance sheet leverage in the banking system, monitoring of Leverage Ratio is in place as per SBP directives with the following objectives:

- constrain the build-up of leverage in the banking sector which can damage the broader financial system and the economy; and
- reinforce the risk based requirements with an easy to understand and a non-risk based measure.

A minimum Tier 1 leverage ratio of 3% has been prescribed both at solo and consolidated level.

Basel III Liquidity Requirement

The Basel Committee for Banking Supervision (BCBS) has introduced Liquidity Coverage Ratio (LCR) and Net Stable Funding Ratio (NSFR) under its BASEL III reforms. As part of Basel III implementation in Pakistan, SBP issued guidelines on June 23, 2016 to implement Liquidity standards in line with BCBS timelines, keeping in view the conditions as applicable in Pakistan. The Bank is maintaining both the liquidity ratios, under Basel III, with a considerable cushion over and above the regulatory requirement to mitigate any liquidity risk.

Liquidity Coverage Ratio (LCR)

The objective of Liqudiity Coverage Ratio (LCR) is to ensure short-term resilience of the liqudity risk profile of the bank by ensuring availability of adequate High Quality Liquid Assets to survive a significant stress scenario lasting for 30 calendar days. All banks are required to maintain LCR at least 100% on an ongoing basis.

Governance of Liquidity Risk Management

Liquidity risk is the potential for loss to the Bank arising from either its inability to meet its obligations or to fund increases in assets as they fall due without incurring an unacceptable cost. The Bank's Board of Directors sets Bank's policy for managing liquidity risk and entrusts accountability for supervision of the implementation of this strategy to senior management. Senior management exercises its responsibilities for managing market & liquidity risk through various committees including the Asset & Liability Management Committee (ALCO). Treasury department manages the Bank's liquidity position on a daily basis. The Bank's main approach of managing the liquidity risk is to make certain that it will always have adequate liquidity to meet its liabilities when they are due in normal and stressed scenarios without incurring any untoward expenditure or risking reputational harm. ALCO monitors the maintenance of liquidity ratios, depositor's concentration both in terms of the overall funding mix and avoidance of undue reliance on large individual deposits. Regular liquidity stress testing is conducted under a variety of scenarios covering both normal and more severe market conditions. There is an Asset Liability Management Framework in place for focused handling of Liquidity. This framework also incorporates early warning indicators.

Liquidity Gap Reporting

Regarding behaviour of non-maturity deposits (non-contractual deposits), the Bank conducted a behavourial study using value at risk methodology. On the basis of its findings 9.14% of current accounts and saving accounts are bucketed into Upto 1- year maturity while 90.86% of current accounts saving accounts are bucketed in over 1 year maturity.

Net Stable Funding Ratio (NSFR)

The objective of Net Stable Funding Ratio (NSFR) is to reduce funding risk over a longer time horizion by requiring banks to fund their activites with sufficiently stable sources of funding on ongoing basis. Banks are required to maintain NSFR requirement of at least 100% on an ongoing basis from December 31, 2017.
